7. Objective and rationale: <input type="checkbox"/> food safety, <input type="checkbox"/> animal health, <input checked="" type="checkbox"/> plant protection, <input type="checkbox"/> protect humans from animal/plant pest or disease, <input checked="" type="checkbox"/> protect territory from other damage from pests.
8. Nature of the urgent problem(s) and reason for urgent action: <i>Tuta absoluta</i> is considered as a key pest of tomato both in the field and under protected conditions. Both yield and fruit quality can be significantly reduced by the direct feeding of the pest and the secondary pathogens which may then enter through the wounds made by the pest. Severely attacked tomato fruits lose their commercial value. 50–100% losses have been reported on tomato. <i>T. absoluta</i> is potentially a serious pest of tomato in the warmer parts of Egypt, both in the field and in protected conditions. <i>T. absoluta</i> has spread from Central America to most of South America, Europe and most of south Mediterranean countries where significant damage is reported. In addition, control may be complicated by the appearance of pest resistance to insecticides. <i>T. absoluta</i> does not exist in Egypt. Therefore, Egypt decided to take this emergency action.
