

Medium risk plants for use as nursery stock

Case Description

Effective: 27 July 2022

This case describes the requirements for the importation of nursery stock defined as "medium risk". This case does not cover the importation conditions for medium risk aquatic plants or plants that are susceptible to methyl bromide treatment.

Import Destination: Australia

Related Information:

- Work Instruction: Inspecting medium-risk nursery stock undergoing post-entry quarantine growth

Alerts

There are no current alerts applicable to this import case. Users should be aware that alerts can have significant impact on import conditions and, as such, should check this import case on the BICON website regularly.

Change Notices

Addition of *Philodendron nangaritense* to Medium risk plants for use as nursery stock

The Department of Agriculture, Fisheries and Forestry (the department) has completed a Weed Risk Assessment for *Philodendron nangaritense* and has determined that this species does not pose a weed risk to Australia. As a result, this species has been added as a permitted species of the BICON case 'Medium risk plants for use as nursery stock'.

Who does this notice affect:

Importers (and their customs brokers) who wish to import these species for an end use of nursery stock, and department staff.

Background:

The Weed Risk Assessment and Disease Risk Assessment systems are science-based quarantine risk analysis tools for determining the weed potential of a species and the disease risks of a genus. All plants proposed for importation into Australian territory and not currently permitted on BICON are assessed for their potential to introduce disease or become weed species in Australia. Further information on the assessment process is available on the department's website.

Import permits:

Current import permits will not be updated to reflect this change, any permit holders intending to import this species will have to apply for a variation to include this additional species.

Further information:

Please contact Plant Import Operations on 1800 900 090 or by email at imports@agriculture.gov.au.

Import Scenario Definition

The following import scenarios are applicable to this import case:

Import Scenarios		Section
Applicable species	Tissue culture	1
	Other than tissue culture	2

1. Applicable species — Tissue culture

Further information on importing live plants can be found on the [department's website](#).

Import of nursery stock from Pacific community countries is under review and currently not permitted. This case contains genera which are possible hosts of Banana Bunchy Top Virus. For enquiries regarding the import for this commodity from Pacific community countries, please contact the department at imports@agriculture.gov.au.

Pacific community (SPC) countries are:

American Samoa; Cook Islands; Fiji; French Polynesia; Guam; Kiribati; Marshall Islands; Micronesia, Federated States of; Nauru; New Caledonia; Niue; Northern Mariana Islands; Palau; Papua New Guinea; Pitcairn Islands; Samoa; Solomon Islands; Tokelau; Tonga; Tuvalu; Vanuatu and Wallis and Futuna.

1.1. Import Requirements

- a. Only the following [scientific names \(see Appendix 6\)](#) may be imported

All subordinate taxa (e.g. varieties, subspecies, forms and subforms) of listed species are also permitted.

Hybrids are permitted if all parents used for the hybridisation are listed as permitted. Imported hybrids must be clearly labelled with their full parentage for identification by the department.

Import conditions prior to arrival in Australian territory

- b. Prior to the importation of goods into Australian territory, a valid import permit issued by the Department of Agriculture, Fisheries and Forestry is required.
An import permit may be obtained by submitting an import permit application to the department (use the 'Apply Now' button at the bottom of this page).
To apply you must logon to BICON and complete an application for Nursery stock

Important reminder to importers

Goods that require a valid import permit, but arrive without one, including where an import permit application is currently under consideration, will be directed for export from Australian territory or required to be destroyed in an approved manner.

- c. The tissue culture must be free from any bacteria, fungal infection, live insects, nematodes, disease symptoms, viroids or other extraneous contamination of quarantine concern.
To demonstrate compliance with this requirement you must present the following on a Phytosanitary certificate:
- i. For tissue cultures with culture media, the additional declaration:
"Tissue cultures in this consignment were visually inspected immediately prior to export and found to be free from any symptoms of disease or microbial infection."
- OR
- ii. For tissue cultures without culture media, the additional declaration:
"Prior to the removal of the plant tissue from media, the tissue cultures were inspected and found to be free of contamination. The plant tissue was aseptically transferred under supervision to sterile containers which were then sealed and not subsequently re-opened"
Tissue cultures without culture media must be from a [department approved source](#).
- d. The species of the plant/s must be identified.
To demonstrate compliance with this requirement you must present the following on a Phytosanitary certificate, Manufacturer's declaration, Invoice or Packing declaration:
The full botanical name.
- e. The containers/culture bags must be labelled with the full botanical name of the plant including genus and species.
The department permits the use of abbreviations on the labelling of the container/culture bags provided that the accompanying documentation (e.g. packing list, phytosanitary certificates, CITES certificates, invoices, etc.) and labels on the consignments correspond and that the documentation clearly identifies the plants by their botanical names.
If the documentation does not match the consignment, or if the documentation does not clearly provide the botanical name, then the consignment is to be held and the importer advised to supply further information or details to verify the identification of the plants.
- f. The tissue cultures must be contained in sterile and sealed containers/culture bags that prevent the passage of contaminating organisms into and out of the containers/culture bags.
- g. **Tissue cultures with culture media**
1. Containers/culture bags must be visually clear in construction so as to allow inspection of the culture and media by a biosecurity officer. Opaque containers and broken containers will not be accepted.
 2. The culture media must be clear, solid and sterile and placed in the container/culture bag prior to plant tissue implantation.
 3. The tissue cultures must have been established and grown in the container/culture bag in which they are imported. The plantlets must show evidence of root or callus development.
 4. The tissue culture media may contain charcoal. Importers must note that tissue cultures containing excess charcoal are both difficult and time consuming to inspect for contamination. It is the importer's responsibility to ensure the level of charcoal in the media does not prevent visual inspection by the biosecurity officer.

The department reserves the right, if considered necessary to check for the presence of pathogens, assay for the presence of antibiotics and other anti-microbial agents, or to check the identity of plants being imported at the importer's expense.

h. Tissue cultures without culture media

1. Containers/culture bags must be visually clear in construction to allow inspection of the cultures by a biosecurity officer. Opaque containers and broken containers will not be accepted. Plantlets should not be wrapped in paper or other material that impedes or prevents their inspection by the biosecurity officer.
2. The plantlets must show evidence of root or callus development.

i. In order to facilitate clearance, airfreight or mail shipments should have all documentation securely attached to the outside of the package, and clearly marked 'Attention Quarantine'.

j. Airfreight and mail shipments must be addressed in the following manner:

Importer's Name

Importer's Address

C/- Inspections Group

[Department of Agriculture, Fisheries and Forestry regional office](#)

k. For shipments arriving by commercial air or mail, plant material packed into boxes or secondary containers must weigh less than or equal to 20 kg in total weight.

l. The importer must complete and submit a [Notice of Importation \(NOI\)](#) to the Department of Agriculture, Fisheries and Forestry regional office in the port of arrival. Full container load (FCL) shipments must have the NOI completed and faxed or emailed to the relevant regional nursery stock office prior to shipment of the container.

Shipments other than FCL must have the NOI completed and faxed or emailed to the relevant regional nursery stock office at least seven working days prior to the arrival of the consignment. Failure to do so may result in a delayed inspection of the consignment.

Import conditions on arrival in Australian territory

m. All plant material must be declared on arrival and presented to a biosecurity officer for inspection.

n. All consignments must be visually inspected by a biosecurity officer on arrival for freedom from bacterial and fungal infection, disease symptoms, live insects and other extraneous contamination of biosecurity concern. Tissue cultures must have 100% of plants inspected.

o. If the above requirements are met, the material may be released to the importer with no further quarantine impediment.

p. If there is a problem with the consignment of tissue culture, a range of outcomes can apply (Appendix [1](#)).

q. If material arrives direct to the importer without the correct biosecurity direction it is their responsibility to secure the material and contact the department to ensure all requirements are met (e.g. inspection, treatments and growth in approved arrangement sites).

Additional information

r. Under the [Biosecurity Charges Imposition \(General\) Regulation 2016](#) and Chapter 9, Part 2 of the [Biosecurity Regulation 2016](#), fees are payable to the Department of Agriculture,

Fisheries and Forestry for all services. Detail on how the department applies fees and levies may be found in the [Charging guidelines](#).

- s. In addition to the conditions for the goods being imported, non-commodity concerns must be assessed including container cleanliness, packaging and destination concerns, and may be subject to inspection and treatment on arrival. Please refer to the Non-Commodity Cargo Clearance BICON case for further information.

2. Applicable species — Other than tissue culture

Further information on importing live plants can be found on the [department's website](#).

Import of nursery stock from Pacific community countries is under review and currently not permitted. This case contains genera which are possible hosts of Banana Bunchy Top Virus. For enquiries regarding the import for this commodity from Pacific community countries, please contact the department at imports@agriculture.gov.au.

Pacific community (SPC) countries are:

American Samoa; Cook Islands; Fiji; French Polynesia; Guam; Kiribati; Marshall Islands; Micronesia, Federated States of; Nauru; New Caledonia; Niue; Northern Mariana Islands; Palau; Papua New Guinea; Pitcairn Islands; Samoa; Solomon Islands; Tokelau; Tonga; Tuvalu; Vanuatu and Wallis and Futuna.

2.1. Import Requirements

- a. Only the following [scientific names \(see Appendix 6\)](#) may be imported

All subordinate taxa (e.g. varieties, subspecies, forms and subforms) of listed species are also permitted.

Hybrids are permitted if all parents used for the hybridisation are listed as permitted. Imported hybrids must be clearly labelled with their full parentage for identification by the department.

Import conditions prior to arrival in Australian territory

- b. Prior to the importation of goods into Australian territory, a valid import permit issued by the Department of Agriculture, Fisheries and Forestry is required.
An import permit may be obtained by submitting an import permit application to the department (use the 'Apply Now' button at the bottom of this page).
To apply you must logon to BICON and complete an application for Nursery stock

Important reminder to importers

Goods that require a valid import permit, but arrive without one, including where an import permit application is currently under consideration, will be directed for export from Australian territory or required to be destroyed in an approved manner.

- c. The species of the plant/s must be identified.
To demonstrate compliance with this requirement you must present the following on a Phytosanitary certificate, Manufacturer's declaration, Invoice or Packing declaration:
The full botanical name.
- d. Prior to export, the plants or plant products must be inspected or tested by the National Plant Protection Organisation (NPPO) according to appropriate procedures and be considered free from biosecurity pests.
To demonstrate compliance with this requirement you must present the following on a Phytosanitary certificate:
The declaration "*This is to certify that the plants, plant products or other regulated articles described herein have been inspected and/or tested according to appropriate official procedures and are considered to be free from the quarantine pests specified by the importing contracting party and to conform with the current phytosanitary requirements of the importing contracting party, including those for regulated non-quarantine pests.*"
If the phytosanitary certificate is issued after dispatch the date of inspection must be identified as an additional declaration.
- e. All plant material must be free from soil, disease symptoms and other extraneous contamination of biosecurity concern.
- f. Nursery stock with stems/trunks greater than 10 cm in diameter or more than 1.5 m in length may be subject to additional quarantine measures to ensure that the biosecurity risks are addressed.
- g. Plant material must be packed in clean, new packaging. For non-FCL consignments the packaging must be secure, rigid and insect proof. Sealed cardboard cartons in a sound undamaged state are acceptable.
- h. Packing material can be used to help reduce the risk of damage to the plant during transport. For a list of acceptable packaging material which may be used for transport of plants please refer to packing materials for the packaging of plants (Appendix 2).
- i. For shipments arriving by commercial air or mail, plant material packed into boxes or secondary containers must weigh less than or equal to 20 kg in total weight.
- j. Plant material must be labelled with botanical names including both genus and species. Unidentified nursery stock is subject to export or disposal at cost to the importer.
- k. Airfreight and mail shipments must be addressed in the following manner:
Importer's Name
Importer's Address
C/- Inspections Group
[Department of Agriculture, Fisheries and Forestry regional office](#)
- l. In order to facilitate clearance, airfreight or mail shipments should have all documentation securely attached to the outside of the package, and clearly marked 'Attention Quarantine'.
- m. The importer must complete and submit a [Notice of Importation \(NOI\)](#) to the Department of Agriculture, Fisheries and Forestry regional office in the port of arrival. Full container load (FCL) shipments must have the NOI completed and faxed or emailed to the relevant regional nursery stock office prior to shipment of the container.

Shipments other than FCL must have the NOI completed and faxed or emailed to the relevant regional nursery stock office at least seven working days prior to the arrival of the consignment. Failure to do so may result in a delayed inspection of the consignment.

- n. If material arrives direct to the importer without the correct biosecurity direction it is their responsibility to secure the material and contact the department to ensure all requirements are met (e.g. inspection, treatments and growth in approved arrangement sites).

Import conditions on arrival in Australian territory

- o. All plant material must be declared on arrival and presented to a biosecurity officer for inspection.
- p. All consignments must be unloaded for inspection by a biosecurity officer.
If correctly certified, full container load consignments will be directed to an appropriate approved arrangement site with seals intact for unpacking under departmental supervision, followed by inspection.
- q. All consignments must be inspected by the biosecurity officer for freedom from live insects, live snails, soil, disease symptoms and any other extraneous contamination of biosecurity concern. This includes the removal of all packaging material around the plants.
Part of the packaging material may be kept temporarily as loose packaging around the roots of the plants to help prevent desiccation of roots during fumigation. Packaging must be distributed so as not to prevent penetration of the fumigant. Any packaging retained for the fumigation treatment must be removed and disposed of prior to plants being established in post entry quarantine.
- r. Seedlings may be imported established in growth plugs made of compressed peat or an inert material such as Oasis© or Rock Wool.
Note: The importation of nursery stock in growth plugs is at the importer's risk. The Department of Agriculture, Fisheries and Forestry takes no responsibility if any of the plants are destroyed during the treatment process.
Upon fumigation, peat may cause the methyl bromide to become phytotoxic and may lead to the destruction of the plants.
A random sample of the growth plugs will be inspected to ensure that:
 1. the plugs are 100% peat or an inert material
 2. the media is not contaminated or infested.Note: The random sample should equate to 5% of the sample size for inspection.
The plug is to be removed from the plant for inspection. Provided that the plugs pass the inspection, the goods must be directed for fumigation.
There is no requirement for the growth plug to be removed prior to establishment in post entry quarantine once it has been fumigated. All other waste should be disposed of in the appropriate waste bin at the Department of Agriculture, Fisheries and Forestry-approved post entry quarantine facility and does not need to be returned to the department for disposal.
- s. If disease symptoms or nematodes are detected, the consignment will be placed on hold. An assessment of the biosecurity risk will be made by a plant pathologist to determine the options that may be available to the importer. These options may include any one of the following:

1. appropriate risk mitigation measures (at the importer's expense and risk) which may include further identification by the department or external service providers, treatment or growth in post entry quarantine, or
2. exportation, or
3. disposal.

Further identification may not result in the release of goods and may incur substantial additional costs and time delays for the importer. Further identification will only be offered if it is deemed feasible and the importer agrees in writing to accept all costs and risks involved.

- t. Following inspection by a biosecurity officer, all plant material must be contained and securely packaged to the satisfaction of a biosecurity officer and forwarded directly to the approved arrangement site for treatment.
- u. All plant material must be fumigated with methyl bromide at an approved arrangement site (class 4.6) as outlined below:
 1. For actively growing plants fumigate at 32 g/m³ for 2 hours at 21 °C.
 2. For dormant non-rooted plants, dormant hardwood cuttings without foliage and dormant budwood without foliage fumigate at 32 g/m³ for 2.5 hours at 21 °C.
 3. For bulb, corms, tubers or rhizomes, fumigate at 32 g/m³ for 3 hours at 21 °C.

Material will be treated bare-rooted and this may affect plants which are established in potting media. Importers are urged to consider this when arranging importation.

- v. Following treatment, all plant material must be contained and securely packaged and forwarded in an enclosed vehicle, directly to the nominated post entry quarantine facility.
- w. All plants must be grown in closed quarantine at either an Australian Government post-entry quarantine facility, or at a class 5.14, 5.24 or 6.1 approved arrangement site.

The importer is responsible for confirming the post entry quarantine facility is approved for growing the species to be imported, and for confirming all arrangements (including space availability and number of plants) prior to the plant material arriving in Australian territory. Importers must clearly nominate on the import permit applications the facility that their material is to be sent to.

- x. There are scheduled fees associated with the growth of nursery stock in an Australian Government Department of Agriculture, Fisheries and Forestry post entry quarantine facility, which must be met by the importer. Refer to the department's [Charging guidelines](#) for further information.
State/territory government post entry quarantine facilities may have different fee schedules and importers are advised to contact the relevant state/territory department for details.
- y. The plants must be grown for a minimum of three months (and until sufficient new growth has occurred to enable them to be screened for any disease symptoms), during which time they must be visually screened by a biosecurity officer for any disease symptoms.
For further details refer to the post entry requirements for growth of imported medium risk nursery stock plant material (Appendix 4) in an approved arrangement site.

- z. Plants that have been screened and found to be free of any disease symptoms may be released from biosecurity control by a biosecurity officer.

Additional information

- aa. Under the [Biosecurity Charges Imposition \(General\) Regulation 2016](#) and Chapter 9, Part 2 of the [Biosecurity Regulation 2016](#), fees are payable to the Department of Agriculture, Fisheries and Forestry for all services. Detail on how the department applies fees and levies may be found in the [Charging guidelines](#).
- ab. In addition to the conditions for the goods being imported, non-commodity concerns must be assessed including container cleanliness, packaging and destination concerns, and may be subject to inspection and treatment on arrival. Please refer to the Non-Commodity Cargo Clearance BICON case for further information.

Appendix 1: Requirement: Medium risk nursery stock of biosecurity concern

Tissue cultures not meeting import requirements must be:

1. deflasked and grown in a quarantine approved post-entry quarantine facility (provided inspection of the plantlets is possible and no obvious pest and disease symptoms are present) for a minimum of three months with two disease inspections, or
2. exported or disposed of at the importer's expense.

If live insects are detected in the tissue culture containers/bags, the cultures shall be rejected and the importer given the option of export or disposal at their expense.

Infected cultures:

Infected cultures are not to be released. All consignments containing infected cultures must be handled as follows:

1. In situations where it is possible to identify that only a certain line/lot or a variety appears to contain infected cultures, then those lines/lots or varieties not containing infected cultures may be released from biosecurity control.
2. The importer must be notified that the consignment is infected and given the option to export or dispose of the goods, or have the infection immediately risk assessed by the biosecurity plant pathologist at their expense.
3. Where the importer elects to have the infection risk assessed by the plant pathologist procedures below are to be followed:

Samples of cultures with contaminated media must be immediately referred to the plant pathologist for assessment.

If the plant pathologist assesses the contamination as low biosecurity risk, all uninfected cultures may be released and the remaining infected cultures are to be:

1. exported or disposed of at the importer's expense, or
2. deflasked and grown in an approved post-entry quarantine facility for three months with two disease inspections.

Note:

The importer is responsible for making all arrangements for the post entry quarantine growth of plants and ensuring that adequate space is available, prior to any movements.

If the plant pathologist deems the contamination to be of biosecurity concern or it cannot be identified in an appropriate timeframe all affected lines are to be exported or disposed of at the importer's expense.

Samples of cultures with disease symptoms on plants must be immediately referred to the plant pathologist for assessment and advice on the action to be taken.

Appendix 2: Information: Materials for the packaging of plants

The following information relates to material used as packaging around live plants, corms, bulbs, tubers and plant cuttings.

The department prefers that plants are imported bare rooted; however packing material can be used to help decrease the risk of damage to the plant during transport to Australia

The following packaging materials are acceptable media for transport of plant material to Australia as long as they are not contaminated with live insects, soil, faeces, contaminant seed, other plant material, animal debris or other biosecurity risk material:

Buckwheat hulls (<i>Fagopyrum esculentum</i>)	Plastic foam
Cardboard	Sawdust*
Cellulose wadding	Shredded clean paper
Charcoal	Synthetic material
Damp paper	Wood shavings*
Granulated cork	Wood wool*
Perlite	Vermiculite
Peat moss	Sphagnum moss

(*Note: Leaching of tannins from these materials during transit may be detrimental to the health and survival of plants.)

Plants should not arrive established in the packaging media as this may cause severe damage to the plants when packaging is removed on inspection.

All packing material must be removed at time of inspection.

Part of the packaging material may be kept temporarily as loose packaging and be placed back around the roots of the plants after inspection. This material may remain around the plant to help prevent desiccation of roots during fumigation. Packaging must not prevent penetration of the fumigant. Packaging can only be kept to protect the plant during fumigation if there is no contamination or biosecurity risk material present on inspection.

Any packaging retained for the fumigation treatment must be removed and disposed of prior to plants being established in post entry quarantine.

Appendix 3: Treatment: Use of methyl bromide as a fumigant

Methyl bromide is widely used as a fumigant for timber, agricultural products, empty containers, foodstuffs, seeds, plants, and fresh fruit and vegetables. It is favoured due to its high toxicity to a wide range of insects coupled with its good penetrating ability and speed of action.

The gas is regarded as a safe fumigant for seeds providing the moisture content is not excessively high and fumigation is not repeated.

Methyl bromide is odourless so small concentrations of chloropicrin (tear gas) are sometimes added as a warning agent. However, chloropicrin is very phytotoxic and must not be used for the fumigation of live plants, fruits, vegetables and seeds.

Residues are likely to be greater in commodities with high oil contents such as nuts.

Highly painted, varnished or glazed timber products are believed to inhibit the penetration of the fumigant.

Plastic wrapping does inhibit the penetration of the fumigant.

Methyl bromide is also known to react with materials containing sulphur to produce objectionable odours which may persist even after prolonged aeration.

Products not ordinarily fumigated with methyl bromide are:

- butter, lard and fats unless in airtight cans
- nuts with high oil content
- avocado fruit
- soybean flour, whole wheat flour, other high protein flours; and baking powders
- bone meal
- charcoal and cinder blocks
- furs, felts, horsehair articles, feather pillows, rug pads
- high rag content writing papers and other high sulphur papers
- iodized salt; salt blocks containing sulphur or its compounds
- leather goods, particularly kid
- photographic chemicals (not camera film or X-ray film), photographic prints and blueprints
- silver polishing papers
- rubber goods, particularly sponge rubber, foam rubber and reclaimed rubber including pillows, mattresses, rubber stamps and upholstered furniture
- woollen, especially angora; soft yarns and sweaters; viscose rayon fabrics
- sulphur-based paint and oil artworks.

Appendix 4: Requirement: Post-entry requirements for growth of imported medium risk nursery stock plant material

1. During growth in quarantine, all plants must be inspected by a biosecurity officer for disease symptoms, twice:
 - 1.1. Once during the active growing period.
 - 1.2. A final inspection must occur no more than seven days prior to release.

(Note: Plants must be grown under conditions conducive to new leaf growth and must show signs of 'active growth' prior to inspection to facilitate the identification of any disease symptoms. In the event that an exotic pest or disease is detected, Plant Import Operations, Canberra office must be contacted for further advice.)
2. The importer or approved arrangement site operator is responsible for notifying the Department of Agriculture, Fisheries and Forestry regional office of the plant material reaching the inspection stages in point one above.
3. All imported plant material must be clearly labelled with the relevant entry number and import permit number and date of arrival in the facility.
4. All imported plant material must be clearly segregated within the facility by date of importation.
5. All plants in the facility must be held on a single-tiered mesh platform raised off the floor to allow for drainage and maintenance.
6. Benches and plants must be separated to allow access for biosecurity inspection. Plants are not to be over-crowded so as to impede their inspection by a biosecurity officer.
7. The approved arrangement site must have an integrated pest management and weed management program effective for controlling insect pests and weeds. The integrated pest management program must include the following:
 - 7.1. The importer or the approved arrangement site operator must inspect the imported plants at regular intervals (e.g. at least weekly) for any insects or disease symptoms. A logbook must be maintained, detailing the date and nature of these inspections. This logbook must be made available to the biosecurity officer during the mandatory department inspections. If any pest or disease symptoms are detected, the Department of Agriculture, Fisheries and Forestry regional office must be contacted immediately and the plants must be retained for inspection by the biosecurity officer.
 - 7.2. Monitoring of imported material for insects using sticky traps (yellow), one trap must be used for every 15 m² of growing area in closed quarantine. Sticky traps must be hung just above the plants.
 - 7.3. One trap must be placed by vents and by doors to detect populations migrating into the quarantine facility.
 - 7.4. Traps must be replaced if they get dirty or crowded with insects. Sticky traps must be retained for inspection by the biosecurity officer.
8. All weeds within and surrounding the quarantine facility must be managed.

-
9. Detailed records of all plant material held in the quarantine facility must be maintained to such an extent that the department is able to accurately trace the fate of consignments. These records must be presented to the biosecurity officer at the time of inspection. Records must include:
 - 9.1. Import permit number.
 - 9.2. Entry number.
 - 9.3. Date of arrival.
 - 9.4. Number and species/variety of plants imported.
 - 9.5. Number of deaths in post entry quarantine.
 - 9.6. Numbers of plants disposed of, with reason for their disposal.
 - 9.7. Numbers of plants released from biosecurity control by the biosecurity officer.
 10. During growth in quarantine, imported plant material shall not to be pruned or propagated or multiplied without prior written permission from a biosecurity officer.
(Note: Generally permission will only be granted for propagations/cuttings to be taken after the imported plants have had their first inspection by a biosecurity officer and no disease concerns have been identified.)
 - 10.1. Records must be maintained of all additional propagations/multiplications undertaken including dates cuttings were taken.
 - 10.2. Any propagations/multiplications/cuttings are also subject to the conditions outlined here and must remain in the facility until released from biosecurity control by a biosecurity officer.
 - 10.3. All propagations/multiplications must be clearly labelled so that they can be linked back to the parent plant from which they originated from.
 - 10.4. All cutting implements used must remain in the quarantine facility and must be sterilised prior to and after their use.
 11. Any plant that dies or fails to establish while in quarantine must be retained and referred to the biosecurity officer.
 12. All spent and unwanted plant material must be disposed of by a department approved method.
 13. The quarantine facility must be maintained in a hygienic condition e.g. leaf litter, plant debris, algae, moss, etc. must not be allowed to build up to an extent whereby it impedes inspection of plants or creates an environment conducive for pest or disease establishment and spread.
 14. Fungicides are not to be used on plants without prior approval from a biosecurity officer.
 15. If further imports are expected or there are other plants still undergoing growth in quarantine, all plants that have been released from biosecurity control shall be removed from the facility.

Appendix 6: Scientific Names

This appendix provides a list of Scientific Names that are covered by, or excluded from, this case.

Included Scientific Names

<i>Acantholimon armenum</i>	<i>Acantholimon glumaceum</i>	<i>Acantholimon hohenackeri</i>
<i>Acantholimon jarmilae</i>	<i>Aceriphyllum rossii</i>	<i>Acidanthera bicolor</i>
<i>Acidanthera capensis</i>	<i>Acidanthera platypetala</i>	<i>Ackama rosifolia</i>
<i>Acorus calamus</i>	<i>Acorus gramineus</i>	<i>Acrodon bellidiflorus</i>
<i>Acrostichum aureum</i>	<i>Acrostichum digitatum</i>	<i>Acrostichum heteroclitum</i>
<i>Acrostichum lingua</i>	<i>Acrostichum punctatum</i>	<i>Acrostichum speciosum</i>
<i>Acrostichum thalictroides</i>	<i>Actinostachys boninensis</i>	<i>Actinostachys digitata</i>
<i>Adenophora bulleyana</i>	<i>Adenophora confusa</i>	<i>Adenophora divaricata</i>
<i>Adenophora forrestii</i>	<i>Adenophora hakusanensis</i>	<i>Adenophora insularis</i>
<i>Adenophora khasiana</i>	<i>Adenophora kurilensis</i>	<i>Adenophora liliifolia</i>
<i>Adenophora morrisonensis</i>	<i>Adenophora nikoensis</i>	<i>Adenophora obtusifolia</i>
<i>Adenophora pereskiiifolia</i>	<i>Adenophora polyantha</i>	<i>Adenophora polymorpha</i>
<i>Adenophora potaninii</i>	<i>Adenophora puellaris</i>	<i>Adenophora radiatifolia</i>
<i>Adenophora remotiflora</i>	<i>Adenophora stricta</i>	<i>Adenophora takedae</i> var. <i>howozana</i>
<i>Adenophora taquetii</i>	<i>Adenophora tashiroi</i>	<i>Adenophora tetraphylla</i>
<i>Adenophora thunbergiana</i>	<i>Adenophora triphylla</i>	<i>Adenophora triphylla</i> var. <i>hakusanensis</i>
<i>Adenophora verticillata</i>	<i>Adenophora verticillata</i> var. <i>angustifolia</i>	<i>Adenophora verticillata</i> var. <i>princeps</i>
<i>Adenophora verticillata</i>	<i>Adlumia fungosa</i>	<i>Adromischus alstonii</i>
<i>Adromischus alveolatus</i>	<i>Adromischus antidorcatus</i>	<i>Adromischus bicolor</i>
<i>Adromischus blosianus</i>	<i>Adromischus caryophyllaceus</i>	<i>Adromischus cooperi</i>
<i>Adromischus cristatus</i>	<i>Adromischus diabolicus</i>	<i>Adromischus fallax</i>
<i>Adromischus filicaulis</i>	<i>Adromischus geyeri</i>	<i>Adromischus hallii</i>

Appendix 7: Documentation Requirements

The information below describes the requirements for documentation presented to the Department of Agriculture to support the risk assessment of imported goods.

Phytosanitary certificate

Phytosanitary certificates are issued by the National Plant Protection Organisation (NPPO) of a country of origin to attest that plants, plant products or other regulated articles meet the phytosanitary import requirements of Australia. This certificate is endorsed by a NPPO representative from the country of origin (or processing) and includes all relevant statements as required by the import conditions.

This document must meet the relevant overarching and consignment-specific requirements outlined below.

- a. **Complete** - All prescribed information required to be on a document must be present and complete. Additional prescribed information below:
 1. The phytosanitary certificate must comply with information on the [International Plant Protection Convention \(IPPC\) website](#).
 2. The document must be issued by the National Plant Protection Organisation (NPPO) of the issuing country.
 3. The document must contain the name of the country of origin of the goods.
 4. The name of the importing country must appear on the certificate.
 5. The document must contain the name and address of the exporter. Address of the exporter (or the exporter's local agent or shipper) should be located in the exporting country.
 6. The document must contain consignee details (including name and address). Sufficient detail should be included in this section to enable the NPPO of the importing country to confirm the identity of the consignee.
 7. The document must contain the number/quantity and description of the packages. Sufficient detail should be included in this section to enable the NPPO of the importing country to link the phytosanitary certificate with the corresponding consignment.
 8. Distinguishing marks may be indicated on the certificate.
 9. The document should contain the declared means of conveyance. Terms such as "sea, air, road, rail, mail and passenger" should be used.
 10. The document must contain the declared point of entry. This should be the first point of arrival in the country of final destination, or if not known, the country name.
 11. The document must identify plants and plant products using accepted scientific names, at least to genus level but preferably to species level.
 12. The document must include a description and quantity of goods.
 13. Additional declarations may be included as required by import conditions.
 14. Each certificate must contain a unique identification number.
 15. Treatments indicated should only be those which are acceptable to the importing country and are performed in the exporting country or in-transit to meet the phytosanitary requirements of the importing country.
 16. When details of methyl bromide treatment are included on a phytosanitary certificate, the department does not require plastic wrapping declarations.

17. The phytosanitary certificate must have been issued no more than six months prior to the date of export, unless otherwise specified in BICON or import permit conditions.
 18. All documents must be endorsed by a representative of the body issuing the document, including their name and date.
 19. Although the preferred language is English, phytosanitary certificates may be accepted in one of the IPPC recognised languages under the ISPM 12.
 20. The document must contain the correct statements as required by BICON or import permit conditions.
 21. The document must contain the mandatory declaration:
"This is to certify that the plants, plant products or other regulated articles described herein have been inspected and/or tested according to appropriate official procedures and are considered to be free from the quarantine pests specified by the importing contracting party and to conform with the current phytosanitary requirements of the importing contracting party, including those for regulated non-quarantine pests."
 22. The certificate must contain the official seal, stamp or embossed mark identifying the issuing NPPO. The stamp may be printed on the certificate or added by the issuing official after the form is completed.
- b. **Legible** - All prescribed information required to be on a document must be legible.
- c. **Valid** - Many documents, such as import permits, are subject to a validity period. Presented documents must comply with the validity requirements specified for that class of document.
- d. **In English** - All prescribed information required to be on a document must be in English. Exceptions to this rule include:
1. company letterheads do not need to be translated into English but must be in English characters (roman alphabet).
 2. commercial, transport and government certification that are required to comply with international standard formats.
 3. signatures and names of individuals.
- Where a document cannot be provided in English, an affidavit will be accepted from either:
1. that country's consulate in Australia.
 2. the Australian embassy in the place of origin.
 3. a translator accredited by the National Accreditation Authority for Translators and Interpreters Ltd.
- e. **Free from erasures and alterations** - All prescribed information on a document must be free from erasures and alterations unless endorsed by an employee of the company who issued the document, or an authorised government official from the government department who issued a certificate. The only acceptable endorsement is a company stamp or seal signed by the company employee (including printed name) or a government stamp or seal signed by a government employee (including printed name) applied adjacent to the alteration.
- f. **Multiple page documents** - Multi page document must:

- include a consignment-specific link on all pages of the document. For example, commercial invoices (or similar) must contain the documents individual reference number (e.g. invoice number) or a numerical link on each page of the document.
- contain an endorsement on the final page of the document, following the information that is being endorsed.

Where a government issued document has noted attachments, the attachments can follow the endorsement. Where an international standard relating to the issuing of veterinary, government or phytosanitary certification does not explicitly require a link on each page of a multiple page certificate, the department will accept the document linkage on the first page of the certificate. For further information about international standards for veterinary, government and phytosanitary certificates please refer to sections 4.3.3, 4.3.4 and 4.3.5 of the [Minimum documentary and import declaration requirements policy](#).

Where a non-government issued document has noted attachments, the attachments are required to meet all of the overarching document requirements contained in section 1 of the [Minimum documentary and import declaration requirements policy](#) inclusive of endorsement.

- g. **Endorsed** - Unless otherwise stated in BICON, on an import permit or on the [department's website](#) for food subject to the Imported Food Inspection Scheme, all documents must be endorsed by an employee of the organisation, corporation, or government authority issuing the document. An endorsement must:
1. be an acceptable signature, electronic signature or stamp as defined in the Definitions section of this policy.
 2. appear after the information that the signatory is endorsing.

Where a document has noted attachments, the endorsement can be made before the attachments, refer to section 1.6 of the [Minimum documentary and import declaration requirements policy](#).

- h. **Date of issue** - All documents must identify the date the document was issued including the day, month and year. Packing declarations may contain vessel/voyage number which can be used if a date of issue is not present on the document.
- i. **Consignment specific link** - All documents that are relied on to assess the level of biosecurity risk must have a unique consignment-specific link. Examples of consignment identification include:
- container numbers
 - bill numbers
 - commercial invoice numbers
 - lot codes
 - preferential tariff certificate numbers
 - packing list numbers
 - letter of credit numbers.

Where a document does not contain one of the accepted forms of consignment identification, a numerical link to another document that does contain appropriate consignment identification must be present.

Examples of acceptable numerical links include:

- order numbers
- reference numbers
- any other internal reference numbers used by overseas companies
- vessel/voyage references
- flight number and arrival date.

Numerical links alone cannot be used as consignment identification links.

Unacceptable numerical links are references that could be present in previous or subsequent consignments and relate to a model, type or standardised item number.

Examples of unacceptable numerical links include:

- number of packages
- weights
- dates
- stockkeeping unit
- item codes.

Note¹: Annual packing declarations and Imported Food Inspection Scheme importer declarations are exempt from having consignment-specific links.

Note²: For acceptable consignment identification on phytosanitary certificates refer to sections 4 and 5 of [ISPM 12](#).

- j. **Conflicting information on documents** - Where there is conflicting information contained within a document, the document must not be accepted. Conflicting information occurs when prescribed information on one part of the document conflicts with other prescribed information on the same document.

For further information, please refer to the [Minimum documentary and import declaration requirements policy](#).

Note: Government certification received as an e-Cert are not required to be endorsed with a stamp or seal of the issuing national competent authority as outlined in the Minimum Documentary and Import Declaration Requirements Policy. Details on e-Cert requirements are located on the [department's website](#).

Manufacturer's declaration

A declaration provided by the manufacturer of the goods, which is specific to the goods in the consignment and attests to the condition/processing/treatment of the goods.

A manufacturer is the entity that has made/manufactured/produced/processed the goods that are being imported.

This document must meet the relevant overarching and consignment-specific requirements outlined below.

- a. **Complete** - All prescribed information required to be on a document must be present and complete. Additional prescribed information below:

1. The document must have been issued and dated within the last six months, unless otherwise specified.
 2. The document must be on the manufacturing company's letterhead and include their name and address.
 3. Declarations must include the employee name and their title within the company of the person issuing the document.
 4. The document must contain the correct statement(s) as required by the import conditions.
 5. The document must be specific to the good(s) and consignment unless otherwise stated in BICON, an import permit, or the [department's website](#) for food subject to the Imported Food Inspection Scheme.
 6. Declarations will only be accepted from the company that manufactured/produced the goods (either the specific site or head office within the country of export) unless stated otherwise.
- b. **Legible** - All prescribed information required to be on a document must be legible.
- c. **Valid** - Many documents, such as import permits, are subject to a validity period. Presented documents must comply with the validity requirements specified for that class of document.
- d. **In English** - All prescribed information required to be on a document must be in English. Exceptions to this rule include:
1. company letterheads do not need to be translated into English but must be in English characters (roman alphabet).
 2. commercial, transport and government certification that are required to comply with international standard formats.
 3. signatures and names of individuals.
- Where a document cannot be provided in English, an affidavit will be accepted from either:
1. that country's consulate in Australia.
 2. the Australian embassy in the place of origin.
 3. a translator accredited by the National Accreditation Authority for Translators and Interpreters Ltd.
- e. **Free from erasures and alterations** - All prescribed information on a document must be free from erasures and alterations unless endorsed by an employee of the company who issued the document, or an authorised government official from the government department who issued a certificate. The only acceptable endorsement is a company stamp or seal signed by the company employee (including printed name) or a government stamp or seal signed by a government employee (including printed name) applied adjacent to the alteration.
- f. **Multiple page documents** - Multi page document must:
- include a consignment-specific link on all pages of the document.
For example, commercial invoices (or similar) must contain the documents individual reference number (e.g. invoice number) or a numerical link on each page of the document.

- contain an endorsement on the final page of the document, following the information that is being endorsed.

Where a government issued document has noted attachments, the attachments can follow the endorsement. Where an international standard relating to the issuing of veterinary, government or phytosanitary certification does not explicitly require a link on each page of a multiple page certificate, the department will accept the document linkage on the first page of the certificate. For further information about international standards for veterinary, government and phytosanitary certificates please refer to sections 4.3.3, 4.3.4 and 4.3.5 of the [Minimum documentary and import declaration requirements policy](#).

Where a non-government issued document has noted attachments, the attachments are required to meet all of the overarching document requirements contained in section 1 of the [Minimum documentary and import declaration requirements policy](#) inclusive of endorsement.

- g. **Endorsed** - Unless otherwise stated in BICON, on an import permit or on the [department's website](#) for food subject to the Imported Food Inspection Scheme, all documents must be endorsed by an employee of the organisation, corporation, or government authority issuing the document. An endorsement must:
1. be an acceptable signature, electronic signature or stamp as defined in the Definitions section of this policy.
 2. appear after the information that the signatory is endorsing.

Where a document has noted attachments, the endorsement can be made before the attachments, refer to section 1.6 of the [Minimum documentary and import declaration requirements policy](#).

- h. **Date of issue** - All documents must identify the date the document was issued including the day, month and year. Packing declarations may contain vessel/voyage number which can be used if a date of issue is not present on the document.
- i. **Consignment specific link** - All documents that are relied on to assess the level of biosecurity risk must have a unique consignment-specific link. Examples of consignment identification include:
- container numbers
 - bill numbers
 - commercial invoice numbers
 - lot codes
 - preferential tariff certificate numbers
 - packing list numbers
 - letter of credit numbers.

Where a document does not contain one of the accepted forms of consignment identification, a numerical link to another document that does contain appropriate consignment identification must be present.

Examples of acceptable numerical links include:

- order numbers
- reference numbers
- any other internal reference numbers used by overseas companies
- vessel/voyage references

- flight number and arrival date.

Numerical links alone cannot be used as consignment identification links.

Unacceptable numerical links are references that could be present in previous or subsequent consignments and relate to a model, type or standardised item number.

Examples of unacceptable numerical links include:

- number of packages
- weights
- dates
- stockkeeping unit
- item codes.

Note¹: Annual packing declarations and Imported Food Inspection Scheme importer declarations are exempt from having consignment-specific links.

Note²: For acceptable consignment identification on phytosanitary certificates refer to sections 4 and 5 of [ISPM 12](#).

- j. **Conflicting information on documents** - Where there is conflicting information contained within a document, the document must not be accepted. Conflicting information occurs when prescribed information on one part of the document conflicts with other prescribed information on the same document.

For further information, please refer to the [Minimum documentary and import declaration requirements policy](#).

Invoice

A commercial document issued by the seller to the buyer indicating the products, quantities and prices for the goods being imported. This document will also include an invoice or order number.

This document must meet the relevant overarching and consignment-specific requirements outlined below.

- a. **Complete** - All prescribed information required to be on a document must be present and complete. Additional prescribed information below:
1. The document must include the name and physical address of the supplier.
 2. The document must include Commercial Reference numbers, such as invoice or order numbers.
 3. The document must include a description and quantity of the goods.
 4. The document must include the name and physical address of the purchaser.

Note: Where it is a requirement under the Imported Food Inspection Scheme (IFIS), an import condition on an import permit, or a BICON case states that a certain requirement can be produced, provided or stated on a commercial invoice, then the invoice must meet the overarching documentary and letterhead requirements of the [Minimum documentary and import declaration requirements policy](#).

- b. **Legible** - All prescribed information required to be on a document must be legible.

- c. **Valid** - Many documents, such as import permits, are subject to a validity period. Presented documents must comply with the validity requirements specified for that class of document.
- d. **In English** - All prescribed information required to be on a document must be in English. Exceptions to this rule include:
1. company letterheads do not need to be translated into English but must be in English characters (roman alphabet).
 2. commercial, transport and government certification that are required to comply with international standard formats.
 3. signatures and names of individuals.

Where a document cannot be provided in English, an affidavit will be accepted from either:

1. that country's consulate in Australia.
 2. the Australian embassy in the place of origin.
 3. a translator accredited by the National Accreditation Authority for Translators and Interpreters Ltd.
- e. **Free from erasures and alterations** - All prescribed information on a document must be free from erasures and alterations unless endorsed by an employee of the company who issued the document, or an authorised government official from the government department who issued a certificate. The only acceptable endorsement is a company stamp or seal signed by the company employee (including printed name) or a government stamp or seal signed by a government employee (including printed name) applied adjacent to the alteration.
- f. **Multiple page documents** - Multi page document must:
- include a consignment-specific link on all pages of the document. For example, commercial invoices (or similar) must contain the documents individual reference number (e.g. invoice number) or a numerical link on each page of the document.
 - contain an endorsement on the final page of the document, following the information that is being endorsed.

Where a government issued document has noted attachments, the attachments can follow the endorsement. Where an international standard relating to the issuing of veterinary, government or phytosanitary certification does not explicitly require a link on each page of a multiple page certificate, the department will accept the document linkage on the first page of the certificate. For further information about international standards for veterinary, government and phytosanitary certificates please refer to sections 4.3.3, 4.3.4 and 4.3.5 of the [Minimum documentary and import declaration requirements policy](#).

Where a non-government issued document has noted attachments, the attachments are required to meet all of the overarching document requirements contained in section 1 of the [Minimum documentary and import declaration requirements policy](#) inclusive of endorsement.

- g. **Endorsed** - Unless otherwise stated in BICON, on an import permit or on the [department's website](#) for food subject to the Imported Food Inspection Scheme, all documents must be endorsed by an employee of the organisation, corporation, or government authority issuing the document. An endorsement must:

1. be an acceptable signature, electronic signature or stamp as defined in the Definitions section of this policy.
2. appear after the information that the signatory is endorsing.

Where a document has noted attachments, the endorsement can be made before the attachments, refer to section 1.6 of the [Minimum documentary and import declaration requirements policy](#).

- h. **Date of issue** - All documents must identify the date the document was issued including the day, month and year. Packing declarations may contain vessel/voyage number which can be used if a date of issue is not present on the document.
- i. **Consignment specific link** - All documents that are relied on to assess the level of biosecurity risk must have a unique consignment-specific link. Examples of consignment identification include:
 - container numbers
 - bill numbers
 - commercial invoice numbers
 - lot codes
 - preferential tariff certificate numbers
 - packing list numbers
 - letter of credit numbers.

Where a document does not contain one of the accepted forms of consignment identification, a numerical link to another document that does contain appropriate consignment identification must be present.

Examples of acceptable numerical links include:

- order numbers
- reference numbers
- any other internal reference numbers used by overseas companies
- vessel/voyage references
- flight number and arrival date.

Numerical links alone cannot be used as consignment identification links.

Unacceptable numerical links are references that could be present in previous or subsequent consignments and relate to a model, type or standardised item number.

Examples of unacceptable numerical links include:

- number of packages
- weights
- dates
- stockkeeping unit
- item codes.

Note¹: Annual packing declarations and Imported Food Inspection Scheme importer declarations are exempt from having consignment-specific links.

Note²: For acceptable consignment identification on phytosanitary certificates refer to sections 4 and 5 of [ISPM 12](#).

- j. **Conflicting information on documents** - Where there is conflicting information contained within a document, the document must not be accepted. Conflicting information occurs when prescribed information on one part of the document conflicts with other prescribed information on the same document.

For further information, please refer to the [Minimum documentary and import declaration requirements policy](#).

Packing declaration

A document produced by the overseas packer/supplier that describes how the goods in a container were packed, the type of packing material used in the container and whether the container was clean prior to packing.

A packer is an entity who packs the goods into a container or observes the container being packed for export to an Australian territory. In some instances, the packer may also be the supplier or exporter of the goods.

A packing declaration must be provided for all containerised cargo consignments.

This document must meet the relevant overarching and consignment-specific requirements outlined below.

- a. **Complete** - All prescribed information required to be on a document must be present and complete. Additional prescribed information below:
1. Must be issued by the exporter, supplier or packer who packed the goods into the container.
 2. The document must be on the issuing company's letterhead and include their address. An acceptable substitute is the issuing company's stamp or seal which must include the company's name and address.
 3. The document must identify the cargo type, e.g. FCL.
 4. Vessel and voyage numbers may be used if a date of issue is not present on the document.
 5. The document must be endorsed by an employee of the company issuing the packing declaration. Electronic signatures or stamped signatures are acceptable endorsements. These can include company or individual stamps incorporating a stamped signature.
 6. The document must contain all relevant statements as per the [Non-commodity information requirements policy](#).
- b. **Legible** - All prescribed information required to be on a document must be legible.
- c. **Valid** - Many documents, such as import permits, are subject to a validity period. Presented documents must comply with the validity requirements specified for that class of document.
- d. **In English** - All prescribed information required to be on a document must be in English. Exceptions to this rule include:
1. company letterheads do not need to be translated into English but must be in English characters (roman alphabet).

2. commercial, transport and government certification that are required to comply with international standard formats.
3. signatures and names of individuals.

Where a document cannot be provided in English, an affidavit will be accepted from either:

1. that country's consulate in Australia.
2. the Australian embassy in the place of origin.
3. a translator accredited by the National Accreditation Authority for Translators and Interpreters Ltd.

e. **Free from erasures and alterations** - All prescribed information on a document must be free from erasures and alterations unless endorsed by an employee of the company who issued the document, or an authorised government official from the government department who issued a certificate. The only acceptable endorsement is a company stamp or seal signed by the company employee (including printed name) or a government stamp or seal signed by a government employee (including printed name) applied adjacent to the alteration.

f. **Multiple page documents** - Multi page document must:

- include a consignment-specific link on all pages of the document.
For example, commercial invoices (or similar) must contain the documents individual reference number (e.g. invoice number) or a numerical link on each page of the document.
- contain an endorsement on the final page of the document, following the information that is being endorsed.

Where a government issued document has noted attachments, the attachments can follow the endorsement. Where an international standard relating to the issuing of veterinary, government or phytosanitary certification does not explicitly require a link on each page of a multiple page certificate, the department will accept the document linkage on the first page of the certificate. For further information about international standards for veterinary, government and phytosanitary certificates please refer to sections 4.3.3, 4.3.4 and 4.3.5 of the [Minimum documentary and import declaration requirements policy](#).

Where a non-government issued document has noted attachments, the attachments are required to meet all of the overarching document requirements contained in section 1 of the [Minimum documentary and import declaration requirements policy](#) inclusive of endorsement.

g. **Endorsed** - Unless otherwise stated in BICON, on an import permit or on the [department's website](#) for food subject to the Imported Food Inspection Scheme, all documents must be endorsed by an employee of the organisation, corporation, or government authority issuing the document. An endorsement must:

1. be an acceptable signature, electronic signature or stamp as defined in the Definitions section of this policy.
2. appear after the information that the signatory is endorsing.

Where a document has noted attachments, the endorsement can be made before the attachments, refer to section 1.6 of the [Minimum documentary and import declaration requirements policy](#).

- h. **Date of issue** - All documents must identify the date the document was issued including the day, month and year. Packing declarations may contain vessel/voyage number which can be used if a date of issue is not present on the document.
- i. **Consignment specific link** - All documents that are relied on to assess the level of biosecurity risk must have a unique consignment-specific link. Examples of consignment identification include:
- container numbers
 - bill numbers
 - commercial invoice numbers
 - lot codes
 - preferential tariff certificate numbers
 - packing list numbers
 - letter of credit numbers.

Where a document does not contain one of the accepted forms of consignment identification, a numerical link to another document that does contain appropriate consignment identification must be present.

Examples of acceptable numerical links include:

- order numbers
- reference numbers
- any other internal reference numbers used by overseas companies
- vessel/voyage references
- flight number and arrival date.

Numerical links alone cannot be used as consignment identification links.

Unacceptable numerical links are references that could be present in previous or subsequent consignments and relate to a model, type or standardised item number.

Examples of unacceptable numerical links include:

- number of packages
- weights
- dates
- stockkeeping unit
- item codes.

Note¹: Annual packing declarations and Imported Food Inspection Scheme importer declarations are exempt from having consignment-specific links.

Note²: For acceptable consignment identification on phytosanitary certificates refer to sections 4 and 5 of [ISPM 12](#).

- j. **Conflicting information on documents** - Where there is conflicting information contained within a document, the document must not be accepted. Conflicting information occurs when prescribed information on one part of the document conflicts with other prescribed information on the same document.

For further information, please refer to:

- [Minimum documentary and import declaration requirements policy](#)
- [Non-commodity information requirements policy](#)
