## Notification of the presence of a harmful organism (2775)

<b>1 General information</b>	
1.1 Title	Confirmed finding of <i>Popillia japonica</i> in Germany (Bavaria)
1.2 Executive summary	<p>In August 2024, one beetle of <i>Popillia japonica</i> was caught in a pheromone trap in Bavaria, less than 1000 m away from the border to Austria. The trap has been installed during the national survey program in Germany. Further traps are being set in a radius of 1 km and the NPPO of Austria was informed to enable close cooperation. The trap was located close to a motorway that leads to the south including known demarcated areas in Switzerland and Italy.</p> <p>Therefore, it is presumed that the beetle was introduced as a hitchhiker. No indication of an established population could be found so far.</p>
<b>2 Information concerning the single authority and responsible persons</b>	
2.1 Notification from	Julius Kühn-Institut (JKI), Institute for National and International Plant Health, Germany
<b>3 Location</b>	
3.1 Location	in Bavaria
<b>4 Reason of the notification and the pest status</b>	
4.1 First finding in Germany or in the area	Confirmed appearance of the pest in part of the territory of Germany, in which its presence was previously unknown.
4.2 Pest status of the area where the harmful organism has been found present, after the official confirmation.	Absent: other

4.3 Pest status in Germany before the official confirmation of the presence, or suspected presence, of the harmful organism.	Other: status under determination
4.4 Pest status in Germany after the official confirmation of the presence of the harmful organism.	Other: status under determination
<b>5 Finding, sampling, testing and confirmation of the harmful organism</b>	
5.1 How the presence or appearance of the harmful organism was found.	<p>Pest related official survey.</p> <p>The pheromone trap was checked every 14 days. On the 6<sup>th</sup> of August 2024, one dead beetle was found in the trap. The trap is located close to an apple orchard. No visible symptoms of <i>Popillia japonica</i> could be detected during the survey in the surrounding area. The trap was located close to the highway A96, which leads in its prolongation to the south directly through the demarcated areas for <i>Popillia japonica</i> of Switzerland (Tessin) and Italy (Lombardia). Furthermore, the highway A1 leads directly from Zürich in Switzerland (demarcated area in Kloten) to the A96 in Germany. Therefore, it is presumed that the beetle is most likely a hitchhiker.</p>
5.2 Date of finding:	06-08-2024
5.3 Sampling for laboratory analysis.	Date of sampling: 06-08-2024
5.4 Name and address of the Laboratory	<p>Bayrische Landesanstalt für Landwirtschaft (LfL) – Institut für Pflanzenschutz</p> <p>Lange Point 10</p> <p>85354 Freising</p> <p>Germany</p>
5.5 Diagnostic method	<p>According to peer reviewed protocols PM 7/77 (1) - Documentation and reporting on a diagnosis</p> <p>Morphological identification with a binocular microscope.</p>
5.6 Date of official confirmation of the pest.	09-08-2024
<b>6 Infested area, and the severity and source of the outbreak in that area</b>	
6.1 Characteristics of the infested area and its vicinity.	Open air – production area: orchard/vineyard
6.2 Infested plant(s), plant product(s) and other object(s).	<p>Object: trap (1 pce)</p> <p>1 beetle was caught in a trap next to an apple orchard.</p>

6.3 Severity of the outbreak.	One dead beetle was found in a pheromone trap. No symptoms of <i>Popillia japonica</i> could be found in the area around the trap.
6.4 Source of the outbreak	The beetle is most likely a hitchhiker from the demarcated areas in Switzerland and Italy. The highway A96 is nearby, which leads to this areas.
<b>7 Official phytosanitary measures</b>	
7.1 Adoption of official phytosanitary measures.	Official phytosanitary measures have been taken. No demarcated area was established.  Visual examinations around the trap will be intensified. For this purpose, 5 additional traps will be set up in Germany and 5 traps in Austria by our Austrian colleagues in a radius of 1 km around the trap.
7.2 Date of adoption of the official phytosanitary measures:	13-08-2024
7.3 Measures affecting the movement of goods	Measures do not affect import into or movement within the Union of goods
7.4 Specific surveys.	Yes, intensive surveys are carried out in a radius of 1 km around the trap. For this purpose, 5 additional traps will be set up in Germany and 5 traps in Austria by our Austrian colleagues.
<b>8 Pest risk analysis/assessment</b>	Pest risk analysis is not required (harmful organism is listed in Annex II B of Implementing Regulation (EU) 2019/2072.
